Taking special needs technology mainstream

Targeted software in devices, better accessibility features a boon for those with disabilities

"As the education landscape changes, it is necessary to continually adapt to make learning accessible to students with different needs, to support them in building good lives where they can be connected, independent, and heard," said Ms. Michelle Lim, Assistant Director at The Disability Resource Centre.

"Advances in inclusive technology over the years have helped many people with disabilities, including for example, people with hearing impairments, to participate in social and educational activities. It is important for us to continue to develop and implement technologies that cater to the diverse needs of our population."
